

PROJECT SPECIFICATION

Official Website for
El Gawafel Sportives de Gafsa (EGSG)

Club	El Gawafel Sportives de Gafsa (EGSG) — ■■■■■■■■ ■■■■■■■■■■ ■■■■■■
Founded	1967
Location	Gafsa, Tunisia
League	Tunisian Ligue Professionnelle 2 (sometimes Ligue 1)
Colors	Green & Yellow (with white stripes on the crest)
Languages	Arabic + English (bilingual)
Document purpose	Complete specification for an AI coding tool to build the website from scratch

This document contains everything an AI development tool needs to design, structure, and implement a modern, mobile-friendly official website for EGSG. Follow every section carefully. Do not invent features that are not listed. Use placeholders where content is missing.

1. Project Overview

Build a clean, modern, bilingual (Arabic + English) official website for the Tunisian football club **El Gawafel Sportives de Gafsa (EGSG)**. The club is based in Gafsa and currently competes in the Tunisian Ligue Professionnelle 2 (second division). It has a history of promotion to Ligue 1.

The website must serve as the main digital presence of the club: inform fans about matches and results, attract new supporters, present the team identity, squad, history, news, and visual content.

2. Primary Goals

- Provide up-to-date information about matches, results, and live scores.
- Attract and engage new supporters from Gafsa and beyond.
- Present the club identity, history, and values clearly.
- Showcase the current squad (with placeholders for photos until available).
- Offer a photo gallery and news/blog section.
- Be fully responsive and work well on mobile phones (primary usage).
- Support both Arabic (RTL) and English (LTR) languages.

3. Target Audience

Local fans in Gafsa and the surrounding region, Tunisian football supporters, diaspora fans, journalists, and potential new supporters. The majority of users will access the site from mobile phones.

4. Design Guidelines

4.1 Brand Colors

Primary: Green (#006B3F or closest professional green) and Yellow (#FFD700 / gold). Use green as the main brand color for headers, buttons, and accents. Use yellow for highlights, CTAs, and secondary elements. Keep backgrounds clean (white or very light gray). Text should be dark for readability.

4.2 Typography & Layout

Clean, modern sans-serif fonts. Clear hierarchy. Generous spacing. Avoid clutter. The design should feel energetic and proud of the club, without looking childish. Support full RTL layout when the language is set to Arabic.

4.3 Official Logo

The official club crest is provided (see cover of this document and the attached logo file). It is a shield shape with horizontal green and white stripes, yellow "EGSG" lettering, the year "1967", and Arabic text "النادي الرياضي الغافسي" at the top. The AI **must use this exact logo** throughout the website (header, favicon, about page, etc.). Do not invent a new logo. Provide the logo file in multiple sizes (favicon, header, large) and keep the original transparent/white background handling clean.

4.4 Responsive Design

Mobile-first. The site must look excellent on phones, tablets, and desktops. Navigation should collapse into a hamburger menu on small screens.

5. Language Requirements (Bilingual)

The website must support **Arabic** and **English**.

- Default language: Arabic (or provide a language switcher on first visit).
- Clear language switcher (AR | EN) visible in the header on every page.
- Full RTL support when Arabic is selected.
- All UI labels, navigation, buttons, and content sections must be available in both languages.
- Content that is not yet translated can show a placeholder message in the other language.

6. Website Structure & Pages

The following pages are required. Navigation should be clear and consistent across the site.

6.1 Home / Landing Page

Purpose: First impression and quick access to key information.

- Hero section with club name, logo placeholder, and short slogan/tagline.
- Next match card (date, time, opponent, venue) – data from API if possible.
- Latest result highlight.
- Short "About the Club" teaser with link to full About page.
- Latest news / blog posts (2–3 cards).
- Call-to-action to follow on social media or join as a supporter.

-
- Clean footer with links and contact info.

6.2 About the Team / Club

- Club full name in Arabic and English/French: ██████████ ██████████ ████████ / El Gawafel Sportives de Gafsa (EGSG).
- Founded in **1967** (shown on the official crest).
- Short history of El Gawafel Sportives de Gafsa.
- Club values and identity.
- Home ground / stadium information (name, city, capacity if known – use placeholders).
- Achievements and important milestones (promotions, cups, etc.).
- Club colors explanation (Green & Yellow) and description of the official crest.

6.3 Squad / Players

- List of current first-team players.
- For each player: name, position, jersey number, nationality (if relevant).
- Player photos: use clean placeholder images (silhouette or initials) because real photos are not available yet.
- Group players by position (Goalkeepers, Defenders, Midfielders, Forwards) or show as cards in a grid.
- Optional: coaching staff section with placeholders.
- Note: Content should be easy to update later when real photos and data arrive.

6.4 Fixtures & Results

- Upcoming fixtures list (date, time, opponent, home/away, competition).
- Past results with final scores.
- Ability to filter or separate Upcoming vs Results.
- League table / standings for Ligue 2 (and Ligue 1 when relevant).
- Data should be fetched from an external football API (see Technical section).

6.5 Live Score Updates

- When a match is live, show current score, minute, and basic status.
- Can be integrated into the Home page and Fixtures page.
- Use the same API source as fixtures/results.

6.6 News / Blog

- List of news articles or blog posts (title, date, short excerpt, featured image placeholder).
- Individual article page.
- Categories or tags are optional but useful (Match Report, Club News, Interview, etc.).
- Admin/content management is not required in the first version – static or simple content is acceptable. Structure the code so content can later be managed easily.

6.7 Photo Gallery

- Grid of photos (match days, training, events, fans).
- Use placeholder images initially.
- Lightbox or simple enlarge-on-click behavior.
- Ability to group by albums/categories later is a plus but not mandatory for v1.

6.8 Contact

- Contact form (name, email, message) – can be frontend-only or connected to a simple backend/email service.
- Club address / stadium location in Gafsa (use placeholder text if exact address unknown).
- Social media links (Facebook, Instagram, X/Twitter, YouTube – use placeholder URLs).

- Optional map embed (Google Maps or OpenStreetMap) for the stadium.

7. Required Features Summary

Feature	Priority	Notes
Bilingual (AR + EN) with language switcher	Must	Full RTL for Arabic
Responsive / Mobile-first design	Must	Primary usage on phones
Home page with next match & latest result	Must	
About the Club page	Must	
Squad page with placeholders for photos	Must	No real player photos yet
Fixtures & Results page	Must	API-driven preferred
Live score updates	Must	When match is ongoing
News / Blog section	Must	List + single article
Photo Gallery	Must	Placeholders initially
Contact page + form	Must	
Social media links	Must	Placeholder URLs ok
League standings	Should	From API
SEO basic setup	Should	Meta titles, descriptions
Membership / ticket sales	Nice-to-have	Not required in v1
Online shop	Nice-to-have	Not required in v1

8. Technical Specifications

8.1 Recommended Tech Stack

The AI tool may choose a modern, maintainable stack. Preferred options:

- Frontend: Next.js (React) or similar modern framework with good SSR/SSG support.
- Styling: Tailwind CSS or equivalent utility-first CSS for rapid, consistent design.
- Language handling: next-intl, react-i18next, or equivalent i18n solution with RTL support.
- Alternative acceptable: clean static site (HTML/CSS/JS) or WordPress if the tool prefers it – but modern framework is preferred for performance and maintainability.
- Hosting: Vercel, Netlify, or any static/JAMstack friendly host is fine.

8.2 Football Data API (Fixtures, Results, Live Scores)

Use **API-Football** (api-sports.io / RapidAPI) as the primary data source. It officially covers Tunisian Ligue 1 and Ligue 2.

- Free tier: 100 requests per day – sufficient for a club website if results are cached.
- Required data: fixtures, results, live scores, standings for the club and its league.
- Implementation notes:
 - Call the API from the server side (or via a lightweight backend/API route) to protect the API key.
 - Cache responses (e.g. revalidate every 30–60 minutes for fixtures, more frequently during live matches).
 - If the API key is not available at build time, use mock/placeholder data and structure the code so the real API can be plugged in easily.

-
- Search for the team using the name “El Gawafel Sportives de Gafsa” or “EGSG” / “Gafsa”.

8.3 Content Management

For version 1, static content or simple Markdown/JSON files are acceptable. Structure the project so that news, squad, and gallery can later be moved to a headless CMS or database without rewriting the frontend.

8.4 Performance & SEO

- Fast loading times, especially on mobile networks.
- Proper meta titles and descriptions for each page (in both languages).
- Open Graph tags for social sharing.
- Accessible HTML (good contrast, semantic tags, alt texts).

9. Content Placeholders & Missing Data

The following items are not available yet (except the logo). The AI must use clear, professional placeholders so the site looks complete and can be updated later:

- **Club logo** → The official logo is provided. Use it everywhere (header, favicon, about page, social sharing). Do not replace it with a generated logo.
- **Player photos** → neutral silhouette or initials avatar for every player (no real photos available yet).
- **Real squad list** → create a realistic sample squad (10–18 players) with Tunisian/Arabic-sounding names and positions. Mark it clearly as sample data.
- **Club history text** → write a short, respectful placeholder history. Founded in 1967. Note that the text should be reviewed by the club.
- **Stadium details** → use “Stade de Gafsa” or similar placeholder.
- **News articles** → create 3–5 sample news posts (match reports, training notes, etc.).
- **Gallery images** → use high-quality free stock football images or solid color placeholders with captions.
- **Social media links** → use # or example URLs; make them easy to replace.
- **Contact email / phone** → placeholder values.

10. Non-Functional Requirements

- The site must be usable without JavaScript for core content (progressive enhancement preferred).
- Code should be clean, well-commented, and easy for a human developer to maintain later.
- Avoid unnecessary external dependencies.
- Do not include any gambling, betting, or adult content.
- Respect Tunisian cultural context in wording and imagery.

11. Out of Scope for Version 1

- User accounts / login system
- Online ticket sales or payment integration
- Full e-commerce shop
- Complex admin panel / CMS (unless the chosen stack makes it trivial)
- Mobile native apps
- Live video streaming

12. Expected Deliverables from the AI Tool

-
- Complete working website (source code).
 - Clear README with setup instructions, environment variables (API keys), and how to update content.
 - Language files or structure for Arabic and English.
 - Placeholder assets (logo, player avatars, gallery images).
 - Instructions on how to connect the real API-Football key.
 - Basic deployment guidance (e.g. Vercel/Netlify).

13. Final Instructions for the AI Builder

Build a polished, production-ready first version of the EGSG website. Prioritize clarity, mobile experience, bilingual support, and clean architecture. Use professional placeholders everywhere real content is missing. Make the design proudly represent the green and yellow of El Gawafel Sportives de Gafsa. Keep the code maintainable so the club can later add real photos, news, and an API key without major rewrites.

When in doubt, choose the simpler, more reliable solution that still looks modern and professional.
